This sequence represents the B-alpha-bisabolene synthase of grand fir (Abies grandis), a wound-inducible enzyme capable of generating multiple sesquiterpenes, especially B-alpha-bisabolene, from farnesyl diphosphare. The sequence differs from the sequence of B-alpha bisavolene synthase AGI (see AAY05562) by a single residue, AGI having an Ala residue at position (see AAY05562) by a single residue, AGI having an Ala residue at position acids and recombinant proteins, as well as expression vectors, and a method of imparting or enhancing production of a gymnosperm sesquiterpene synthase in a prokaryotic or eukaryotic host cell, especially in a plant, in order to impart, enhance or endify production of sesquiterpenoids, and hence to alter the flavour or fragrance of plant products, to improve disease resistance of alter ecological interactions mediated by
                                                                                                                                                                                                                                                                                                                                                                                                                       192
                                                                                                                                                                                                                                                                                                                                                                                                                                                     182

This sequence represents the E-alpha-bisabolene synthase of grand fir (Abies grandis), a wound-inducible enzyme capable of generating multiple sesquiterpenes, especially E-alpha-bisabolene, from farnesyl diphosphate. Another deduced sequence (see AAY05565) for the enzyme has val at position 65. The invention provides gymnosperm sesquiterpene synthase nucleic acids and recombinant proteins, as well as expression vectors, and a method of imparting or enhancing production of a gymnosperm sesquiterpene synthase in a prokaryotic or eukaryotic host cell, sesquiterpenoids, and hence to alter the flavour or fragrance of plant products, to improve disease resistance or to alter ecological interactions mediated by farnesyl diphosphate and its derivatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              193 LRLGLPYDLPYIHLLQTKRQERLAKLSREEIYAVPSPLLYSLEGIQDIVEWERIMEVQSQ 252

2000DK-00001730. 2000US-0253843P. 16-NOV-2001; 2001WO-DK000763 (NOVO) NOVOZYMES AS WO200240694-A2 17-NOV-2000; 29-NOV-2000; 23-MAY-2002. Vind J; Heterologous production of taxane analogs related compound useful as

WPI; 2002-471624/50

The present invention describes the heterologous expression of taxane analogues, comprising cloning a DNA sequence comprising a taxane analogues, comprising cloning a DNA sequence comprising a taxane correct comprising a DNA construct in which the DNA construct into under control of required texanes, introducing the DNA construct into a host cell, growing the host cell to produce taxane analogues, and crecovering the required texane from the culture medium. Also described: recovering the required comprising the taxane synthesis pathway; (1) an isolated DNA sequence; and (3) a host cell comprising a taxane. The isolated DNA sequence; and (3) a host cell comprising a taxane comprised from a taxane-producing organism, plant or synthesis pathway derived from a taxane-producing organism, plant or tree, the taxane synthesis pathway is foreign to the host cell. The taxane analogues have cytostatic activity, and so can be used as anticancer agents. The present sequence represents a taxadiene synthase the control, which is given in an example from the present 730 719 629 VNGFGKDGLKEQGRDVLGYLRKVWEGLLASYTKEAEWSAAKYVPTFNEYVENAKVSIALA 602 422 491 482 551 253 DGSFLSSPASTACVFMHTGDAKCLEFLNSVMIKFGNFVPCLYPVDLLERLLIVDNIVRLG 312 IDRYFKKEIKESLDYYYRYWDAERGVGWARCNPIPDVDDTAMGLRILRIHGYNVSSDVLE 302 362 431 252 ncer agent involves cloning a full-length taxane synthesis pathway taxan-producing organism into a taxane-resistant host cell. **VOCYMRENPECTEREALSHVYGIIDNALKELNWELANPASNAPLCVRRLLFNTARVMOLF** TVVLNSI-PFTGELLPDYILQQVDL--RSKFLHLVSLTGRLINDTKTYQAERNRGELVSS NFRDEKGDFFCFAGGTQIGYTDNLNLYRCSQVCFPGEKIMEEAKTFTTNHLQNALAKNNA LELAKLDFNMVQALHQKETQHI VSWWRESGFNDLIFTRQRPVEMYFSVAVSMFEPFAAC 363 FDKWAVKKDLPGEVEYAIKYPWHRSMPRLEARSYIEQFGSNDVWLGKTVYKMLYVSNEKY LINTLACLLTLKI WINKGDI QVQKGVEFVRKHMEEMKDEAD-NHRPSGFEVVFPAMLDEAKS TGTDT BYHL PFISQIHQKRQKKLQKI PLNVLHNHQTALLYSLEGLQDVVDWQEITNLQSR DGSFLSSPASTACVFMHTQNKRCLHFLNFVLSKFGDYVPCHYPLDLFERLWAVDTVERLG ٠. د.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a purified and isolated nucleic acid sequence encoding a levopimaradiene synthase. The nucleic acid is used for the preparation of a ginkgolide in a cell, an expression vector, a unicellular organism (e.g. Saccharomyces, Bscherichia coli, Candida albicans or Kluyeromyces lactis), a yeast host cell, a plant (particularly Ginkgo biloba), a host cell, a transgenic plant or a seed of the transgenic plant, for the biosynthesis of ginkgolides and in molecular biology, molecular genetics, and organic chemistry. The nucleic acid is capable of producing large amounts of pure ginkgolides in a costeffective manner, particularly in an organism capable of a high-yield ginkgolide-producing system. This sequence represents an E-alphabisabolene synthase polypeptide which shows similarity to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     192
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               LGLDLPYHLPPISQIHQKRQKKLQXIPLNYLHNHQTALLYSLEGLQDVVDWQEITNLQSR 182

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This is a cloned pacific yew taxadiene synthase (TS) protein. The sequence can be used to increase to increase taxol biosynthesis into taxoids in transformed cells. The protein can be modified to improved efficiency, and to redirect the targeting of the expressed polypeptide. The modifications can be to alter catalytic efficiency, to modify substrate utilisation, and to alter product outcome. The antibodies puscific for the mature native pacific, yew TS polypeptide can be used to purify TS polypeptides, cloning TS homologues from Pacific yew or other plant species, and as probes for blots and immunoassays
                                                                                       Pacific yew; taxadiene synthase; taxol biosynthesis; probe; immunoassay.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 MFQSMGDGBTNPSAYDTAWVARIPSI - - DGSGAPQFPQTLQWILANQLPDGSWGBECIFL

                                                                                                                                                           Š
                                                                                                                                                                                         g
                                                                                                                                                                                                         This is the sequence of an B-alpha-bisabolene synthase polypeptide encoded by a computer-generated nucleic acid (see AAX87531) based on arce encoded by a computer-generated nucleic acid (see AAX87531) based on arce isolated grand fir (Abies grandis) B-alpha-bisabolene synthase clone (see AAX87604). It contains conservative amino acid substitutions relative to the native sequence (see AAX06622). B-alpha-bisabolene synthase is a cund-inducible enzyme capable of generating multiple seequitorgenes, convides gymnosperm sesquiterpene synthase nucleic acids and recombinant provides gymnosperm sesquiterpene synthase in a containing production of a gymnosperm sesquiterpene synthase in a comparating or proteins, as well as expression vectors, and a method of imparting or proteins, as well as expression vectors, and a method of imparting or proteins, as well as expression vectors, and a method of imparting or containing production of a gymnosperm sesquiterpene synthase in a containing production of a sequiterpene synthase in a protein containing production of sequiterpenedies, and hence to impart, enhance to impart, enhance to fagrance of plant products, to improve disease and its derivatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RIAYAKTSCLAVILDDLYDTHGSLDDLKLFSBAVRRWDISVLDSVRDNQLKVCFLGLYNT 542

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

vetispiradiene synthase 1 - Hyoscyamus muticus (fragment)
C;Species: Hyoscyamus muticus
C;Species: Hyoscyamus muticus
C;Date: 19-Oct-1995 #sequence_revision 19-Oct-1995 #text_change 29-Sep-1999
C;Accession: AS6118
Biol. Chem. 270, 7375-7381, 1995
A;Title: Cloning and bacterial expression of a sesquiterpene cyclase from Hyoscyamus mut
A;Reference number: AS6118; MUID:95221394; PMID:7706281
A;Accession: AS6118
A;Accession: AS6118
A;Cession: AS6118
A;Cession: AS612
A;Molecule type: mRNA
A;Residues: 1-520 < CABC>

Drobable limonene cyclase - Arabidopsis thaliana Cispecies: Arabidopsis thaliana (mouse-ear cress)
AyVariety: columbia
AyVariety: columbia
AyVariety: columbia
Cipacesion: G71434
BiBevan, M.; Barcroft, I.; Bent, E.; Love, K.; Goodman, H.; Dean, C.; Bergkamp, R.; Dirk. P.; Wedler, E.; Wambutt, R.; Weitzenegger, T.; Pohl, T.M.; Terryn, N.; Giel. P.; Wedler, E.; Kotter, P.; Entlan, K.D.; Rieger, M.; Schaeffer, M.; Funk, B. Nature 391, 485-488, 1998
A,Authors: Mueller-Auer, S.; Silvey, M.; Jamés, R.; Montfort, A.; Pons, A.; Funk Drobes, T.; Jones, J.D.G.; Eneva, T.; Palme, K.; Benes, V.; Rechman, S.; Ans. C.; Chalwatzis, N.
A;Title: Analysis of 1.9 Mb of contiguous sequence from chromosome 4 of Arabidopsis thal A; Accession: G71434
A;Reference number: A71400; MUID:98121113; PMID:9461215
A;Recession: G71434
A;Stetus: preliminary; nucleic acid sequence not shown; translation not shown
